DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4, 6-14, 16-32 and 34-37 are rejected under 35 U.S.C. 102(e) as being anticipated by DeBellis et al (DeBellis) 6,044,388.

DeBellis discloses both an apparatus and a method for generating random bits by collecting and storing entropy data (e.g. the time-dependent value T and the secret value S, note column 5, lines 9-22 and 35-40) in a nonvolatile memory (registers 254 and 256 of Fig. 2 also note lines 10-19 of column 9) followed by updating the stored entropy data (T is updated by counter 202 and S is updated by functions F1-F3) followed by using the entropy data to generate the random bits (elements 244, 246 and 248). Relative to hashing the entropy data with newly collected entropy data note column 7, lines 16-32.

Relative to claims 1, 11 and 32 respectively and contrary to applicants' remarks DeBellis' entropy data is "operating system data", "processor data" and data "associated with a state of at least one processor" because DeBellis' entropy data is involved with the operation of the processor. Relative to claims 6, 12, 18, 19, and 24 and contrary to applicants' remarks DeBellis' maintaining of the entropy data in nonvolatile memory is the maintaining of entropy data in a

“protected portion of an operating system kernel”. Relative to claim 7 note column 7, lines 19-25 that calls for the entropy data to not be readily ascertainable by an attacker.

Conclusion

3. This is a continuation of applicant's earlier Application No. 0-9/714,781. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
